

# SCECAL Slow Control to DAQ communication protocol (FERMILAB) V8.2

14/07/2008 16:27

## Changes: Table 1, item 7

The whole communication is, because of different systems (big/little endian), doing in STRINGS.

Table 1 shows the available command structure. All other tables are describing the back coming values.

|     | command     | prefix 1 | prefix 2 | comment                        | comment                              |
|-----|-------------|----------|----------|--------------------------------|--------------------------------------|
| 1.) | run         |          |          | not used                       | send UNIX sec back (up to now)       |
| 2.) | reset       |          |          | not used                       | only a "#" is send back              |
| 3.) | temperature |          |          | get 8 temperature float values |                                      |
|     |             |          |          |                                |                                      |
| 4.) | readout     | mod      | 1 .. 22  | get data for module 1 to 2     | sending parameters for module 1 to 2 |

**Table 1**

### 1.) run

send by DAQ: not defined up to now  
 receive: run#  
 <UNIX seconds>#

*examples:*  
 send: run#  
 receive: 1147349593#

### 2.) reset

send by DAQ: not defined up to now  
 receive: reset#  
 #

*examples:*  
 send: "reset#"  
 receive: "#"

### 3.) temperature

send by DAQ: ask for the actual 8 temperatures  
 receive: temperature#  
 <timestampl in UNIX sec> <T1> ... <T8>#

*examples:*  
 send: "temperature#"  
 receive: "1147349593 1.111111 2.222222 3.333333 4.444444 ... 8.888888#"

### 4.) readout mod 1..32

send by DAQ: the actual status of modules 1 to 32 shall send from SC to DAQ  
 receive: readout mod <1 to 32>#  
 <timestampl> <module no> <data 3> ... <data 18>#

see *Table 2*

| Data | Comment             | unit             |
|------|---------------------|------------------|
| 1    | timestamp           | UNIX sec         |
| 2    | module No           | 1 .. 38          |
| 3    | CMB temp lower      | °C               |
| 4    | CMB temp upper      | °C               |
| 5    | CMB V_calib_at_U041 | V                |
| 6    | CMB power 12V       | V                |
| 7    | CMB REF_1.235V      | V                |
| 8    | CMB VLD_upper_CMB   | V                |
| 9    | CMB VLB upper       | V                |
| 10   | CMB VLB upper       | V                |
| 11   | CMB VLD for LED     | V                |
| 12   | CMB 10V bias        | V                |
| 13   | CMB W calib at U051 | V                |
| 14   | CMB LED settings    | 0 .. 65535 (int) |
| 15   | CMB width           | 0 .. 255 (int)   |
| 16   | CMB height          | 0 .. 255 (int)   |
| 17   | HBAB HV Volt        | V                |
| 18   | HBAB HV Current     | A                |
